PROGRESS IN ORGANIC COATINGS

Subject Index of Volume 25

Accumulative mechanism
  stationary electrophoretic deposit as a concentrated disperse system: effect of accumulative mechanism, 283
Adhesion
  coating adhesion to low surface free energy substrates, 73
  characterization of interfacial chemistries associated with polymer systems by spatially resolved surface analytical methodologies, 95
  arylsilane urethanes of superior weatherability, 275
Adhesion promoter
  laboratory evaluation of epoxy coatings with an adhesion promoter by impedance, 357
Anodic and cathodic sites
  degradation of organic coatings on steel: mathematical models and predictions, 23
Arylsilane diisocyanate urethane
  arylsilane urethanes of superior weatherability, 275

Blisters
  degradation of organic coatings on steel: mathematical models and predictions, 23

Cataphoretic deposition
  influence of substrate on the formation and growth kinetics of cathodic electrocoat paint, 293
Cathodic delamination
  an evaluation of methacrylic acid-modified poly(ethylene) coatings applied by flame spray technology, 203
Coating adhesive
  emulsifier-free latexes and polymers on their base, 109
Coatings
  degradation of organic coatings on steel: mathematical models and predictions, 23
  poly(urethane) cationomers from poly(propylene) glycol and isophorone diisocyanate: emulsion characteristics and tensile properties of cast films, 311
Copolymer–steel linkages
  an evaluation of methacrylic acid-modified poly(ethylene) coatings applied by flame spray technology, 203
Corrosion
  degradation of organic coatings on steel: mathematical models and predictions, 23
  characterization of interfacial chemistries associated with polymer systems by spatially resolved surface analytical methodologies, 95
Corrosion performance
  plasma-polymerized coatings of trimethylsilane deposited on cold-rolled steel substrates. Part 2. Effect of deposition conditions on corrosion performance, 319
Corrosion protection
  paint adhesion, corrosion protection, and interfacial chemistry, 3

Delamination
  stone impact damage to automotive paint finishes: an introduction to impact physics and impact induced corrosion, 43
Deposition conditions
  plasma-polymerized coatings of trimethylsilane deposited on cold-rolled steel substrates. Part 2. Effect of deposition conditions on corrosion performance, 319

Elsevier Science S.A.

Diffusion
degradation of organic coatings on steel: mathematical models and predictions, 23
Disperse particles
stationary electrophoretic deposit as a concentrated disperse system: effect of accumulative mechanism, 283
Dye-laser spectroscopy
new insights in photosensitizers–photoinitiators interaction, 169

Electrical capacity
the reproducibility of impedance parameters obtained for painted specimens, 365
Electrochemical impedance spectroscopy
evaluation of anti-corrosive pigments by pigment extract studies, atmospheric exposure and electrochemical impedance spectroscopy, 339
Electrochemical measurement
a study on the electrochemical inhomogeneity of organic coatings, 379
Electrophoretic deposit
stationary electrophoretic deposit as a concentrated disperse system: effect of accumulative mechanism, 283
Emulsifier-free polymerization
emulsifier-free latexes and polymers on their base, 109
Epoxidized linseed oil
epoxidized vegetable oils as reactive diluents. I. Comparison of vernonia, epoxidized soybean and epoxidized linseed oils, 85
Epoxidized soybean oil
epoxidized vegetable oils as reactive diluents. I. Comparison of vernonia, epoxidized soybean and epoxidized linseed oils, 85
Epoxy binder
laboratory evaluation of epoxy coatings with an adhesion promoter by impedance, 357
Epoxy–poly(amide) binder
evaluation of anti-corrosive pigments by pigment extract studies, atmospheric exposure and electrochemical impedance spectroscopy, 339
Excited state processes
excited state processes in polymerization photoinitiators, 235

Film formation
emulsifier-free latexes and polymers on their base, 109
Film growth
influence of substrate on the formation and growth kinetics of cathodic electrocoat paint, 293
Flame spray
an evaluation of methacrylic acid-modified poly(ethylene) coatings applied by flame spray technology, 203
Flux
degradation of organic coatings on steel: mathematical models and predictions, 23

Glassflake epoxy coatings
laboratory evaluation of epoxy coatings with an adhesion promoter by impedance, 357

Hardness
arylsilane urethanes of superior weatherability, 275
Heat distortion
coating adhesion to low surface free energy substrates, 73

Impact damage
stone impact damage to automotive paint finishes: an introduction to impact physics and impact induced corrosion, 43
Impact induced corrosion
stone impact damage to automotive paint finishes: an introduction to impact physics and impact induced corrosion, 43
Impact resistance
arylsilane urethanes of superior weatherability, 275
Impedance
laboratory evaluation of epoxy coatings with an adhesion promoter by impedance, 357
Impedance modulus
the reproducibility of impedance parameters obtained for painted specimens, 365
Interface
degradation of organic coatings on steel: mathematical models and predictions, 23

Interfacial chemistry
paint adhesion, corrosion protection, and interfacial chemistry, 3
Interparticle interaction
stationary electrophoretic deposit as a concentrated disperse system: effect of accumulative mechanism, 283

Latex dispersion property
emulsifier-free latexes and polymers on their base, 109
Leather
some speciality coatings from radiation curable poly(acrylic) combinations, 221
Low frequency tail
the reproducibility of impedance parameters obtained for painted specimens, 365

Mathematical model
degradation of organic coatings on steel: mathematical models and predictions, 23
Metal surface
some speciality coatings from radiation curable poly(acrylic) combinations, 221
Methacrylic poly(ethylene) copolymer
an evaluation of methacrylic acid-modified poly(ethylene) coatings applied by flame spray technology, 203
Methylene diisocyanate urethane
arylsilane urethanes of superior weatherability, 275

Non-toxic primers
evaluation of anti-corrosive pigments by pigment extract studies, atmospheric exposure and electrochemical impedance spectroscopy, 339
Numerical solution
stationary electrophoretic deposit as a concentrated disperse system: effect of accumulative mechanism, 283
Nyquist impedance plot
the reproducibility of impedance parameters obtained for painted specimens, 365

Optical fibres
some speciality coatings from radiation curable poly(acrylic) combinations, 221
Organic coating
a study on the electrochemical inhomogeneity of organic coatings, 379

Organic coating inhomogeneity
a study on the electrochemical inhomogeneity of organic coatings, 379

Paint adhesion
paint adhesion, corrosion protection, and interfacial chemistry, 3
Photoinitiators
excited state processes in polymerization photoinitiators, 235
Photopolymerization
new insights in photosensitizers–photoinitiators interaction, 169
Photostabilizer additive
characterization of interfacial chemistries associated with polymer systems by spatially resolved surface analytical methodologies, 95
Pigment extract
evaluation of anti-corrosive pigments by pigment extract studies, atmospheric exposure and electrochemical impedance spectroscopy, 339
Plastics
coating adhesion to low surface free energy substrates, 73
Poly(acrylic)paints
some speciality coatings from radiation curable poly(acrylic) combinations, 221
Polymerization
excited state processes in polymerization photoinitiators, 235
Polymerization photoinitiators
new insights in photosensitizers–photoinitiators interaction, 169
Poly(urethane) ionomers
poly(urethane) cationomers from poly(propylene) glycol and isophorone diisocyanate: emulsion characteristics and tensile properties of cast films, 311
Protective properties
influence of substrate on the formation and growth kinetics of cathodic electrocoat paint, 293
PU emulsions
poly(urethane) cationomers from poly(propylene) glycol and isophorone diisocyanate: emulsion characteristics and tensile properties of cast films, 311
Pull-off adhesion
laboratory evaluation of epoxy coatings with an adhesion promoter by impedance, 357

Radiation curable paints
some speciality coatings from radiation curable poly(acrylic) combinations, 221
Reactive diluent
epoxidized vegetable oils as reactive diluents. I. Comparison of vernonia, epoxidized soybean and epoxidized linseed oils, 85
Recycling
coating adhesion to low surface free energy substrates, 73
Resistance
coating adhesion to low surface free energy substrates, 73

Secondary ion mass spectroscopy
characterization of interfacial chemistries associated with polymer systems by spatially resolved surface analytical methodologies, 95
Surface analytical characterization
characterization of interfacial chemistries associated with polymer systems by spatially resolved surface analytical methodologies, 95
Surface pretreatment
coating adhesion to low surface free energy substrates, 73
Synergism
new insights in photosensitizers–photoinitiators interaction, 169

Tensile strength
arylsilane urethanes of superior weatherability, 275
Thermoplastic olefins
coating adhesion to low surface free energy substrates, 73
Thioxanthone series
new insights in photosensitizers–photoinitiators interaction, 169
Trimethyl silane plasma polymerized films
plasma-polymerized coatings of trimethylsilane deposited on cold-rolled steel substrates. Part 2. Effect of deposition conditions on corrosion performance, 319

Vernonia oil
epoxidized vegetable oils as reactive diluents. I. Comparison of vernonia, epoxidized soybean and epoxidized linseed oils, 85
Viscosity
poly(urethane) cationomers from poly(propylene) glycol and isophorone diisocyanate: emulsion characteristics and tensile properties of cast films, 311

Wire beam electrode
a study on the electrochemical inhomogeneity of organic coatings, 379

X-ray photoelectron spectroscopy
paint adhesion, corrosion protection, and interfacial chemistry, 3
characterization of interfacial chemistries associated with polymer systems by spatially resolved surface analytical methodologies, 95

Yellowing
arylsilane urethanes of superior weatherability, 275
